

Quanika

VISITORPOINT

One Platform,
Multiple Solutions,
Unlimited Possibilities.

TRANSFORMATIVE ENTERPRISE SOLUTIONS.

Quanika is transforming enterprises globally, opening pathways that orchestrate business performance and deliver on the full promise of integration, removing silos and enhancing digital and physical workspace efficiency.

Quanika works with customers to transcend the challenges of accumulated complexity, simplifying systems and making them easier to control, to operate and to adapt.

Building performance through strategic partnerships

We work with systems integrators, consultants, and end user enterprises globally to leverage strategic partnerships with best-in-class tech vendors, including Axis Communications, HID, Mercury and Milestone.

Quanika's technology is available through open distribution, is easy to access and easy to work with. Our positive, can-do approach, and our 24/7 tech support, will help you build your future.

Our unrivalled experience of enterprise-wide systems integration brings together physical and logical systems, including access control, video, site safety, visitor management, and core corporate functions, to deliver optimum efficiency and value, letting you meet tomorrow's challenges, today.

Our solutions let you eliminate the inefficiencies of siloed systems and deliver insight and control, for lasting advantages.

The Quanika team will work with you creatively, to identify and solve your unique system challenges.

We deliver the most efficient solutions, ensuring secure and productive connections between people, physical infrastructure and corporate systems.

OUR MISSION, OUR VALUES, OUR PROMISE:

Quanika's mission is to deliver on the true promise of integration, giving our customers the powerful but affordable solutions, they need to protect themselves, and to prosper.

Our success is built on making that vision a reality for all our customers and fulfilling that promise.

Collaboration

We work closely, respond quickly, and succeed together.

Knowledge

Real-world insights and experience drive all our innovations.

Creativity

We pride ourselves in providing creative, logical, elegant solutions.

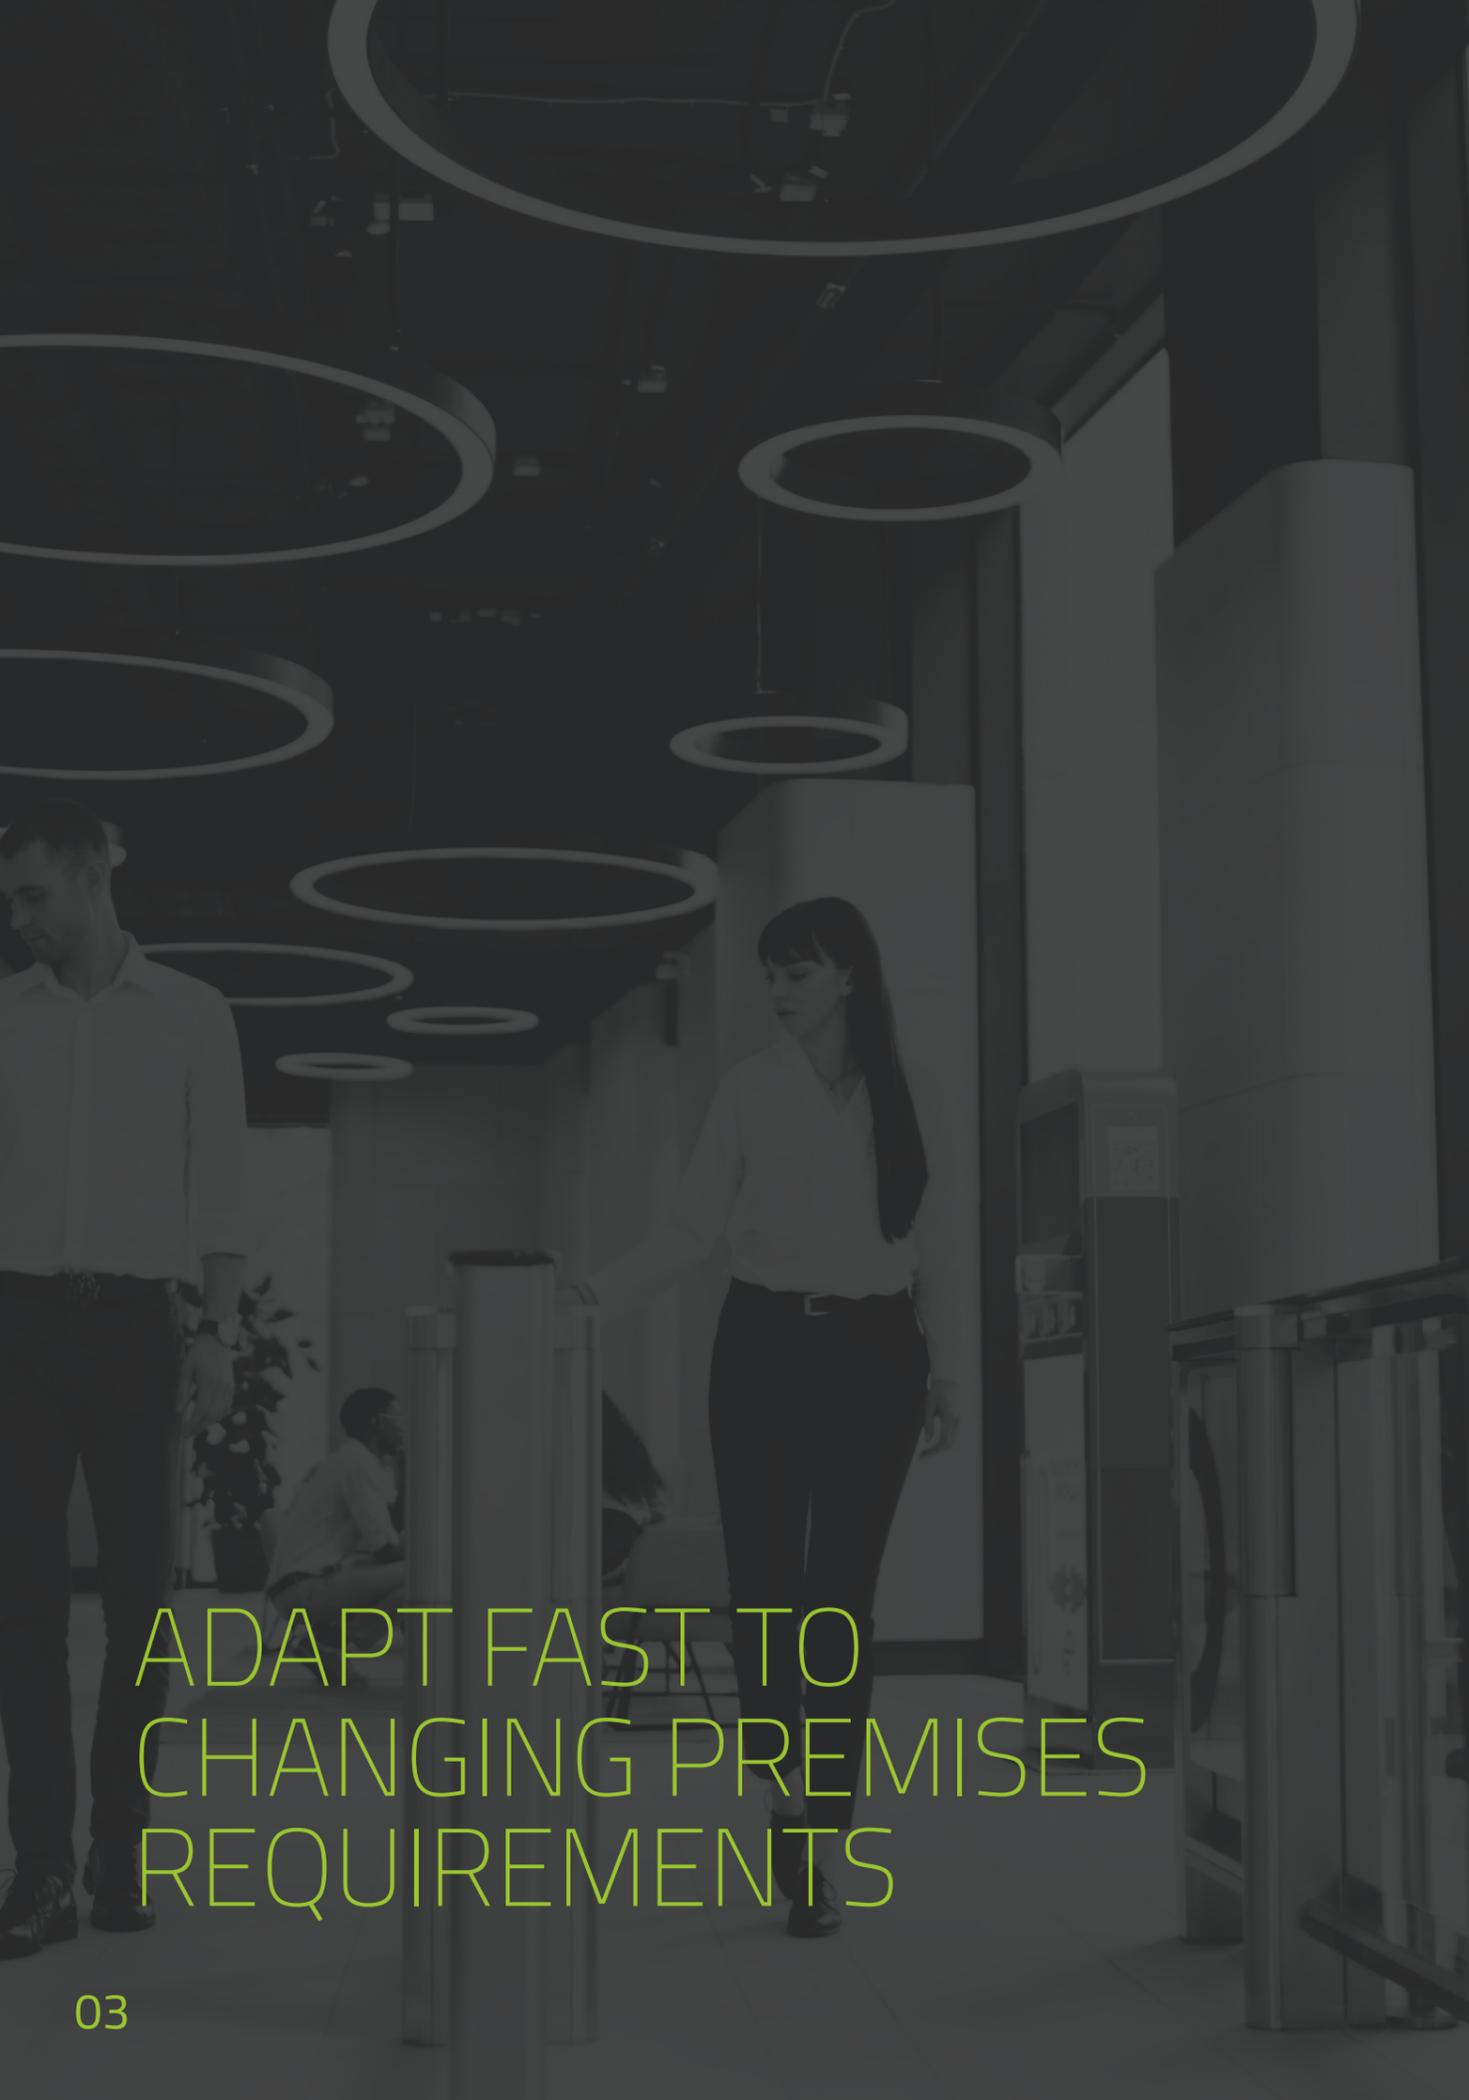

Satisfaction

We look for the best in everything we do, and find satisfaction in success.

Global Reach

We are dedicated to serving local markets, with a global reach.

ADAPT FAST TO CHANGING PREMISES REQUIREMENTS

Make the best first impression, every time.

As your organisation increasingly faces new challenges in the way it uses its buildings, Quanika VisitorPoint gives you the power to adapt and manage your sites more efficiently.

Quanika's proven technologies let you transform your visitor and employee experience – and your wider operations - by combining your security, safety, reception, and analyst functions in a single, powerful and flexible solution.

With VisitorPoint, you'll know exactly who is on site, where they are and when their access authorisations apply, for both your physical spaces and your corporate networks.

VisitorPoint will enhance your organisations efficiency

With VisitorPoint you can make sure your staff, contractors and guests enjoy a smooth, hassle-free welcome every time they arrive on site. With delay-free access, clear information and helpful signposting delivered in advance, and no longer any need to wait in busy reception areas, you know they'll be impressed even before they arrive.

Easing pressure on front-line reception and security teams.

Boosting productivity in the way your people use your facilities.

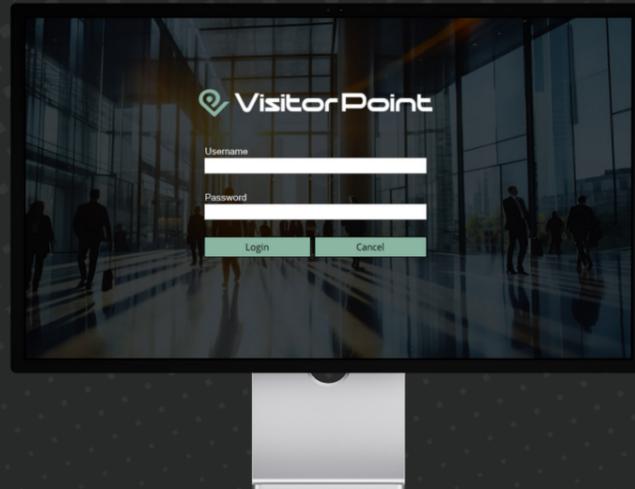

Letting you flex and adapt to rapidly changing building use requirements.

A remarkable transformation – for your people and your operations

Impress your visitors and staff alike with a visitor management solution that delivers the utmost efficiency, ensuring a streamlined and welcoming experience for everyone who steps through your doors

VisitorPoint liberates your organisation from the old constraints that come with managing multiple premises and people.

It sets you free from cumbersome visitor sign-in books, and siloed record systems. VisitorPoint integrates with Microsoft's Active Directory and other widely used databases, together with Outlook, to allow all your visitor processes to be automated, securely.

You'll no longer be told that your visitors are being frustrated by delays, or have to worry about your reception staff struggling under pressure.

And you won't always be wondering if your premises and network security is being compromised by weak points in your systems.

With VisitorPoint you have the reassurance of comprehensive control – for all your access and visitor management, for all your sites and premises, across your whole operation.

FOR THE FIRST TIME, VISITORPOINT GIVES YOU COMPREHENSIVE CONTROL OVER SITE VISITS

ENHANCING YOUR VISITOR AND EMPLOYEE EXPERIENCE

VisitorPoint ensures enhanced site experiences.

Creating a safe, secure, and more productive working environment for staff, contractors, and visitors.

Keeping up to date with changing access authorisations, no matter how fast-moving or complex

Maintaining immediately accessible records of who has been on site, and when.

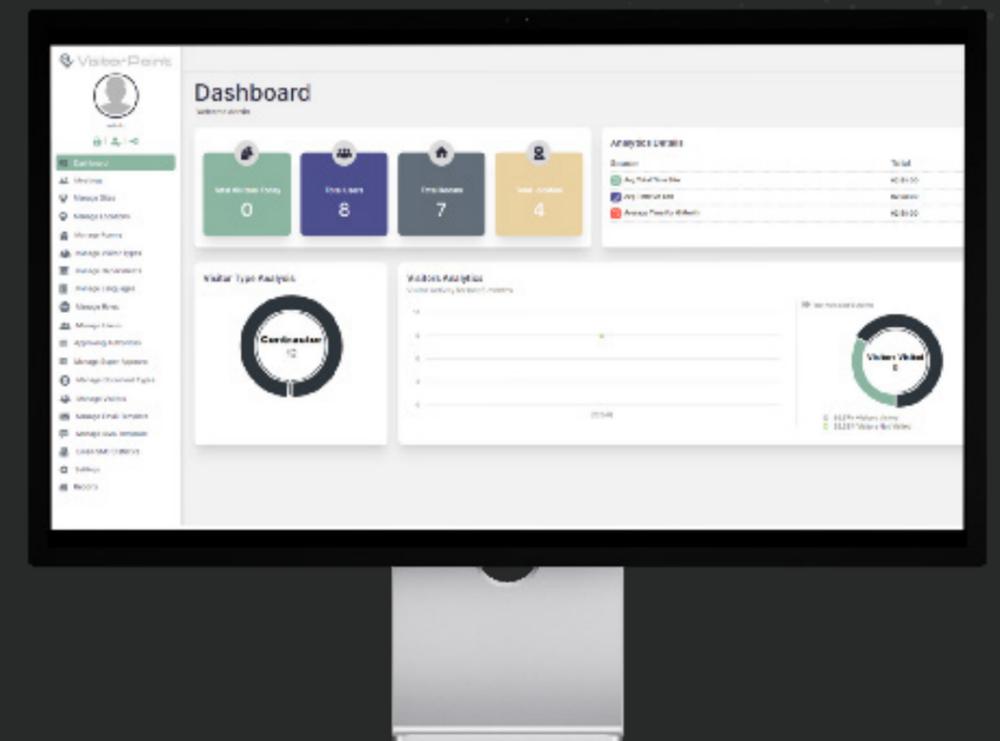

Adapting to effectively meet changing site occupancy requirements.

Optimising your reception and security operations to ease pressure, ensure smooth people-flow, and make the best use of resources.

Above all, VisitorPoint gives you unprecedented control of how people access your sites, making it easy to pivot your operations from week to week, from day to day, to face the future with confidence.

TRANSFORM PERFORMANCE AND OPERATIONAL EFFICIENCY

Seamless integration with best-in-class Door Controllers and IP Intercoms lets you manage and monitor all access points and entrances more easily than ever before.

Quanika's comprehensive software licence covers unlimited doors and cameras. Interactive graphical floor plans help the operator navigate the site. The system also allows for elevator control and unlimited inputs and outputs from readers.

Pivot your operations more quickly – and be ready for new, emerging challenges.

VisitorPoint's functionality lets you automate pre-screening of visitors, contractors, and delivery drivers, and optimise the entire visitor management process, from frictionless access to recording movements and dwell times around facilities.

Visitors and staff can automatically receive secure one-time QR codes via email or mobile apps, ahead of every visit.

Hosts can be automatically informed of guest arrivals in good time to ensure an efficient welcome.

Updated site information and health & safety instructions can be sent ahead too, with acknowledgement required.

On arrival, clear messaging can guide the visitor from allocated car parking or transport links to the correct entrance.

Permit frictionless and even contactless access with multi-factor authentication.

Meeting rooms and other facilities can be reserved, and schedules managed efficiently.

At the appropriate entrance, visitors and staff can use contactless kiosks or anti-viral touch screens to gain access, and they can be provided with courtesy hand gel and hygiene reminders whenever infection risks need to be reduced.

Staff can work more flexibly, moving from location to location without the need to visit security in person every time – and access to premises and networks can be granted, or denied, according to current operational status.

VISITORPOINT IS TAILORED TO THE NEEDS OF EVERY SITE

WITH ITS POWERFUL SUITE OF VISITOR AND ACCESS FUNCTIONS.

A more flexible approach to streamlining and automating visitor management

Quanika VisitorPoint gives you a flexible array of tools and functions to let you optimise operations in the way best suited to every site.

VisitorPoint integrates seamlessly with established business processes and software, including Microsoft Outlook, making it easy for all authorised members of your management teams to use it.

From booking meeting rooms and sending visitor access permissions to guests, to allocating courtesy parking, VisitorPoint puts your people in control and lets them work more efficiently.

And it lets your organisation adapt to changing workflows and patterns of building use, with the ability to automatically update access permissions from your central staff database.

VisitorPoint ensures smooth and efficient access

Use VisitorPoint to easily book meetings through Outlook, and send confirmations with QR codes

When a visitor arrives they present the QR code to the IP intercom and reader for rapid access

At reception, you can choose between allowing visitor self-enrolment or requiring manual ID checks before admission

The relevant host has already been automatically notified to come and meet their guest – visitors use their own QR code to gain access

THE MOST POWERFUL, YET SIMPLE SOLUTION FOR YOUR SITES

ENSURE SMOOTH RUNNING FOR COMPLEX AND MULTI-SITE OPERATIONS

Quanika VisitorPoint allows staff and contractors to be more easily assigned to flexible working locations – with updated, site specific information sent in advance. QR codes can be presented to access readers, video intercoms and self service kiosks.

Meeting rooms and other facilities can be reserved and allocated, network access can be enabled, and staff can work more flexibly with more efficient scheduling.

Quanika VisitorPoint does more than just secure your premises and enhance your visitor experience, it drives up efficiency and productivity at all your locations. At a time of such unprecedented challenges and rapid change, this has never been more important.

High-level visitor security for mission critical sites

Managing contractors securely, with facial recognition tracking

VisitorPoint is used to easily book contractors (through Outlook), and send confirmations with QRcodes

When the contractor arrives LPR/ANPR allows rapid access, followed by manual ID checks at reception

The contractor is enrolled via facial recognition to allow movements to be tracked and reported

Improving arrivals efficiency across all of your sites

How VisitorPoint improves arrival efficiency between multiple sites

Schedule staff movements between specified locations, sending confirmations, with vehicle registration details, QR codes etc.

When staff arrive, they present their QR code to IP intercoms, kiosks or tablets for rapid access to facilities and authorised networks

Meetings can also be pre-booked, rooms reserved, and colleagues notified when that staff member arrives

If staff are enrolled on facial recognition, their movements can be tracked and audited

MANAGING HIGHER RISKS: CHOOSE THE SECURITY LEVEL YOU REQUIRE

Quanika VisitorPoint lets you set your security level exactly according to your risk, and it allows you to choose how your visitors are welcomed.

For example, when vehicles arrive, ANPR allows first level automated identification at the perimeter, followed by driver and passenger ID checks. If required, this can be backed up by enhanced verification at reception, with facial recognition technology.

When visitors are enrolled via facial recognition, this allows their movements to be tracked and monitored around your sites, with full audit trails for verification of events.

Meanwhile, visitor arrivals to meeting only areas present lower risks, rapid yet secure access can be enabled simply by scanning the pre-issued QR codes.

Automated and secure flow of goods

Easier deliveries with number plate recognition

Book deliveries and collections, automating confirmations with vehicle registrations and sending associated QR codes

When the contractor arrives ANPR allows rapid access, followed by manual ID checks at reception

At the loading area the QR code is scanned for confirmation of the delivery or collection

Adapt to changing visitor requirements

Smoother arrivals and an enhanced welcome for VIP Visitors

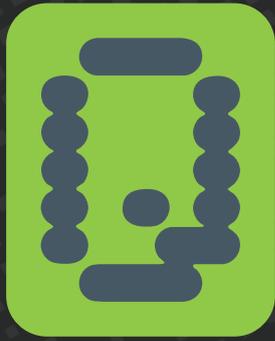

VisitorPoint is used to easily book VIP visits

When the VIP guests arrive ANPR allows priority access to site

You can choose how your VIP guests are welcomed at reception, with courtesy ID checks or other verification such as facial recognition before admission

Meanwhile the relevant hosts have already been automatically notified to come and greet their guests – visitors use their own QR code to gain access

Quanika

One Platform,
Multiple Solutions,
Unlimited Possibilities.

Why Quanika?

Working for major corporate enterprises globally, Quanika operates at the forefront of systems integration, developing the most capable, open architecture software solutions available today.

Whatever size your operation, whatever challenges you face, we'll strengthen your business with all the advanced capabilities you most need, seamlessly and affordably.
